IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

May 12th, 2020		CFR Qingdao, USD/dry tonne							A total of 91 vessels carrying 14.05 million mt of iron ore arrived at major Chinese ports during May 3-9, SMM estimates. This was up 1.21 million mt from the prior week, and up 1.72 million mt from the same period last year. For the same week, iron ore deliveries leaving Australian ports declined 2.08 million mt on the week to 15.6 million mt, some 520,000 mt higher than the same period last year. The decline in shipments was due to maintenance at a number of berths at Australian ports. Shipments that departed Brazilian ports were estimated to fall 820,000 mt from the prior week to 5.27 million mt, roughly flat from the level of the same period last year. Separately, SMM expects the operating rates of blast furnaces in China to extend increase to 87.6% in May, 1.2 percentage point higher than April. The average rate in April expanded 2.3 percentage points on the month to 86.4%. Continued increase in demand from Chinese steel mills will keep iron ore prices firm in the near term

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
