IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Oct 11th, 2021		CFR Qingdao, USD/dry tonne							DCE iron ore futures rose largely today, main contract closed at 797.5, an increase of 6.48% throughout the day; the quotation in the morning was raised by 20yuan/mt from last Friday, some traders were more motivated to offer today, and the quotations have been gradually raised during the intraday trading. With the support of rigid demand, some steel mills are also more enthusiastic about inquiries and transactions. The overall transaction atmosphere of the port spot market is quite good today. PBF at Shandong port dealt 800-900 yuan/mt, up 15-35 yuan/mt from last week; PBF at Tangshan port dealt 910-920 yuan/ton, up 10-20 yuan/mt from last week; PBF at Jiangbei port dealt 915 yuan/mt. According to SMM research, some steel mills in Jiangsu province have resumed production in recent days after undergoing dual control of energy consumption in the early stage; their demand for raw materials such as iron ore has gradually recovered, and local traders quoted relatively strong. In addition, according to feedback from some traders, considering that the mainstream medium-grade fine inventory at ports has not seen an increase, and there are not many sources of goods on hand, which supports the spot market price.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
