IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Oct 12th, 2021		CFR Qingdao, USD/dry tonne							According to data tracked by SMM, 91 ships arrived at domestic main ports from October 4-10. Arrivals of cargoes are estimated to stand at 13.86 million mt, up 390,000 mt from the previous week, but down 809,000 mt year on year. Shipments that departed Australian ports were estimated to decrease 1.28 million mt week on week to 18.2 million mt, up 1.54 million mt on the year, and that from Brazilian ports decreased 2 million mt to 4.3 million mt on a weekly basis, down 3.18 million mt on the year. The arrivals of cargoes at domestic ports increased, but the total shipments from Australia and Brazil declined. The production restrictions eased after the National Day holiday, and the molten iron output is expected to rebound, which will boost the prices. DCE iron ore futures market vibrated narrowly, with flat quotations in the physical port stock market. PBF was closed at 890-900yuan/mt in Shandong market and that in Tangshan market was concluded at 910-920yuan/mt, and total transaction atmosphere proved to be insipid.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
