IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Nov 12th, 2021		CFR Qingdao, USD/dry tonne							DCE iron ore futures market falling trends... an increase of 1.62% throughout the day. The spot quotation in the morning almost kept steady, some traders were active to sell, but steel mills replenishment were completed this week so total transactions was decreased significantly. SSF at Shandong port dealt 390 yuan/mt; PBF at Tangshan port dealt 605-610 yuan/mt; decreased 5-10 yuan/mt over yesterday; As of November 5, the iron ore inventories across the 35 Chinese ports tracked by SMM totalled 145.12 million mt, an increase of 2.29 million mt from the previous week and 19.02 million mt year-on-year. The daily average shipments from the 35 ports dropped 54,000 mt on a weekly basis to 2.75 million mt last week. Some steel mills in north China did not increase the purchases due to environmental protection-related controls, and port arrivals from overseas increased, further raising local port inventory. The sharp drop in imported ore prices also affected the purchasing sentiment of steel mills. However, the shipments from domestic ports are expected to pick up this week as Tangshan may loosen environmental protection-related controls on local steel mills and ports, depending on how the pollution improves, and as some steel mills in Shandong may resume production.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
