## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Feb 17th, 2022		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low <sup>2</sup>	High <sup>2</sup>	DCE iron ore futures market falling sharply trends by 3.79% the main contract closed 684.5. Most traders adopt separate quotations. Market wait-and-see sentiment increased. Some traders were negative to sell, some steel mills tend to buy due to suitable price. Today the overall market transaction atmosphere is acceptable. PBF at Shandong port dealt 830-842 yuan/mt, decreased 30-40 yuan/mt over yesterday. SSF at Shandong port dealt 500 yuan/mt, decreased 20-30 yuan/mt over yesterday. PBF at Tangshan port dealt 835-842 yuan/mt, decreased 20-25 yuan/mt over yesterday. This week, SMM's blast furnace operation rate stood at 77.7%, up 0.2 percentage points week on week and down 2.96 percentage points month on month. This week, the blast furnace operation rate rose slightly from the previous month, mainly because the air condition in North China improved significantly this week, and the blast furnace temporarily controlled and restricted last week has basically resumed production. Follow-up, although the winter Olympics production limit weekend ended, but March 3 - March 13 there are Paralympics production limit. According to SMM research, most steel mills choose to maintain production limit during this period, so in the short term, the operation rate of blast furnace is stable, iron ore demand is difficult to improve, and the price of ore continues to shock operation.

	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump																					
Fe %	65.00	62.00	58.00	62.50	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.  For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a>

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
