IRON ORE SEABORNE INDEX (IOSI)

Aug 15th, 2022		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low ²	High ²	DCE iron ore futures fell today, the main contract 2301 closed 707.5, an decrease of 2.88% throughout the day, some traders were negative to sell, steel mills purchased on demand, total transactions remained insipid. PBF at Shandong port dealt 764-775 yuan/m, decreased 5-10 yuan/mt from last week. SSF at Shandong port dealt 640 yuan/mt from last week, PBF at Tangshan port dealt 775 yuan/mt, decreased 10 yuan/mt from last week. According to SMM shipping data, the total amount of imported ore arriving at the port last week was 23.62 million tons, an increase of 2.29 million tons over the previous period. During this period, the overseas shipment volume was 29.38 million tons, which was a decrease of 57000 tons last week, a slight decrease compared with the previous week; The continuous increase in the arrival volume in this period is mainly due to the increase in the shipment volume at the end of July. The domestic demand growth is slow, and the port inventory will continue to increase, which is bad for the mine price. Superimposed on the poor real estate data today, it is expected that the mine price will continue to be weak and volatile tomorrow.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
