IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Sep 29th, 2022		CFR Qingdao, USD/dry tonne							DCE iron ore futures rose by 0.77% today, the main contract closed 722.5. The enthusiasm of the traders for shipment is fair, and the steel mills are mainly wait-and-see, with few transactions in the market. PBF at Shandong port dealt 753-755 yuan/mt, increased 5-10 yuan/mt than yesterday. PBF at Tangshan port dealt 770-785 yuan/mt, increased 20-35 yuan/mt than yesterday. According to the inventory data of the top ten ports tracked by SMM, the total inventory of the ten ports this week accumulated 0.3% month-on-month to 90.11 million tons. In terms of varieties, both lump ore and pellets have decreased slightly. Up to now, the restocking of steel mills before the holiday has basically ended. Terminal demand is still picking up in October. However, subject to the expectation that the price of coke will still rise, it is expected that the profit of steel mills will remain at the current state. Superimposed on the impact of the major meeting in October, the environmental protection production was restricted ahead of schedule, and the demand for iron ore decreased slightly. On the whole, it is expected that the price of iron ore will remain stable and fluctuate before the National Day.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
