## IRON ORE SEABORNE INDEX (IOSI)

## MARKET COMMENTARY

Nov 4th, 2022		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low <sup>2</sup>	High <sup>2</sup>	DCE iron ore futures rose by 4.91% today, the main contract closed 662.5. The traders' willingness to ship is more. The steel mills are purchase on demand. The overall trading sentiment of the market is more. PBF at Shandong port dealt 665-680 yuan/mt, increase 5-25yuan/mt. PBF at Tangshan port dealt 655-680 yuan/mt, increase 25 yuan/mt. As of November 4, the inventory of 35 ports tracked by SMM totaled 128.73 million tons, 2.56 million tons more than last week, 17.39 million tons less than the same period last year. The average daily port dredging volume of imported ore in this period decreased by 202,000 tons to 2.765 million tons on a weekly basis. The port inventory accumulation in this period is mainly due to the substantial increase in overseas shipment volume this week, and part of the increase in arrival is due to the concentration of sea drift goods in the port. In addition, the economic recession and the European energy crisis have weakened the demand for iron ore in other overseas countries, and the shipment direction of overseas mines has shifted to China. However, the sharp drop in port dredging volume is affected by the drop in hot metal production for blast furnace maintenance, and it is difficult for iron ore

## IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	<b>65% Fe Fines</b>	<b>62% Fe Fines</b>	<b>58% Fe Fines</b>	<b>62.5% Fe Lump</b>	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.  For more details on MMi's iron ore methodology please download the guide published on our website at: <a href="http://www.mmiprices.com">www.mmiprices.com</a>
Fe %	65.00	62.00	58.00	62.50

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
