IRON ORE SEABORNE INDEX (IOSI)

Nov 6th, 2023		CFR Qingdao, USD/dry tonne							MARKET COMMENTARY							
Index	Fe Content	Price	Change	Change %	MTD	YTD	Low ²	High ²	DCE iron ore futures declined by 0.05 % today, the main contract closed at 925. The steel mills are not active to purchase. The overall trading sentiment of the market is less. According to the shipping data tracked by SMM, both overseas shipments and domestic arrivals have increased this week. Due to the cooler weather, the unloading efficiency of ports has accelerated, and the arrival volume has increased by 37% month on month to 25.39 million tons. Considering factors such as steel mill losses, it is expected that the actual number of blast furnace maintenance will still increase in November. There is still a possibility of a significant decline in the production of molten iron, with some loosening of fundamental support. The positive macro sentiment in the early stage continues to digest, and iron ore prices may return to fundamental logic. Considering the acceptable demand for finished products in the industrial chain and limiting the decline in iron ore prices, it is expected that ore prices will mainly fluctuate in the short term.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data. For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com
Fe %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
